

# CLONING THE WORKSHOP GITHUB REPOSITORY TO YOUR GOOGLE DRIVE

## Download Manually and Upload to Drive

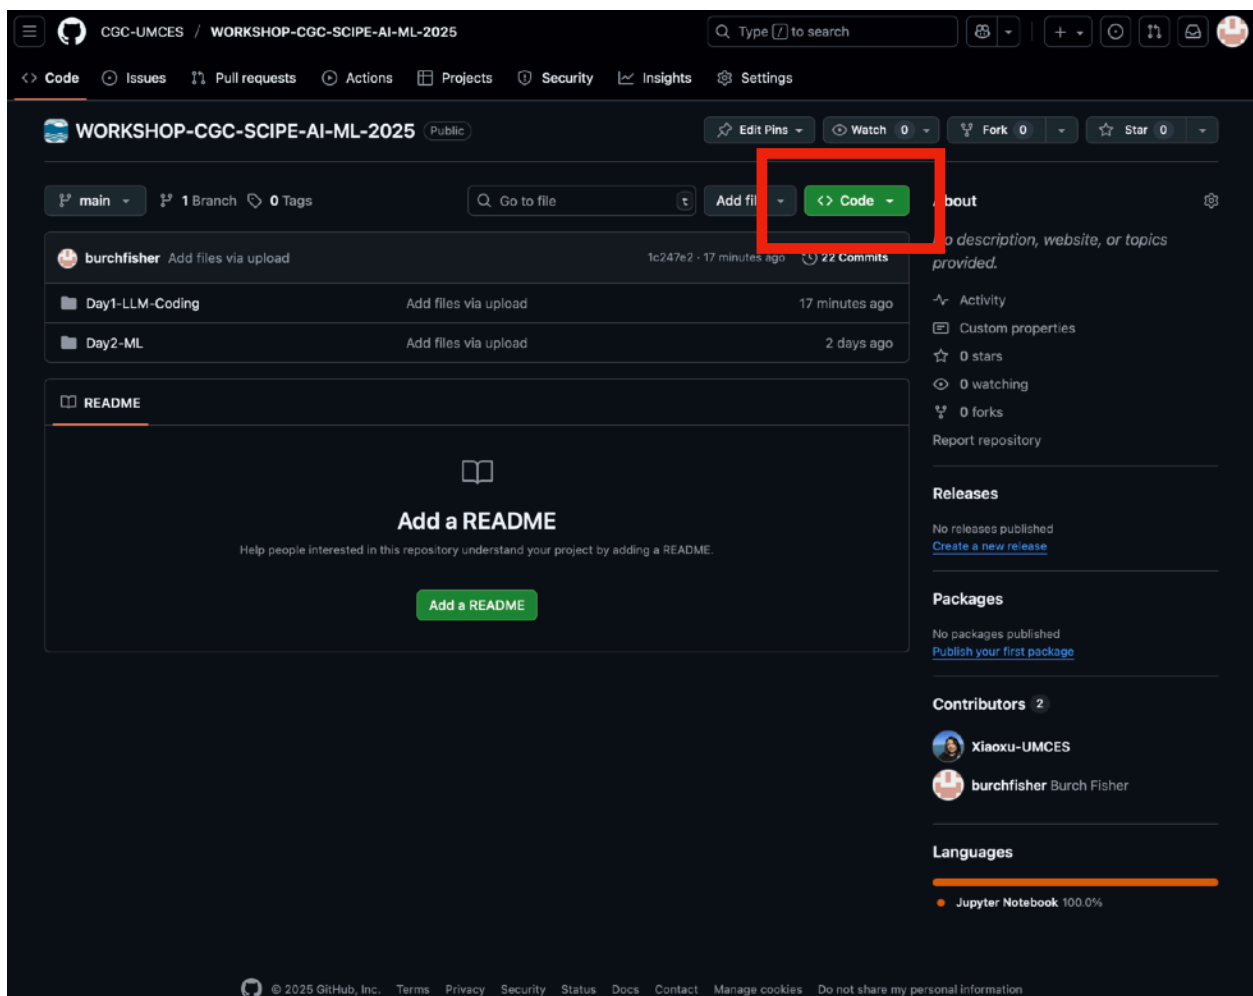

This is the most straightforward method and doesn't require any special tools. It's perfect for smaller repositories. 

## Download the Repository from GitHub

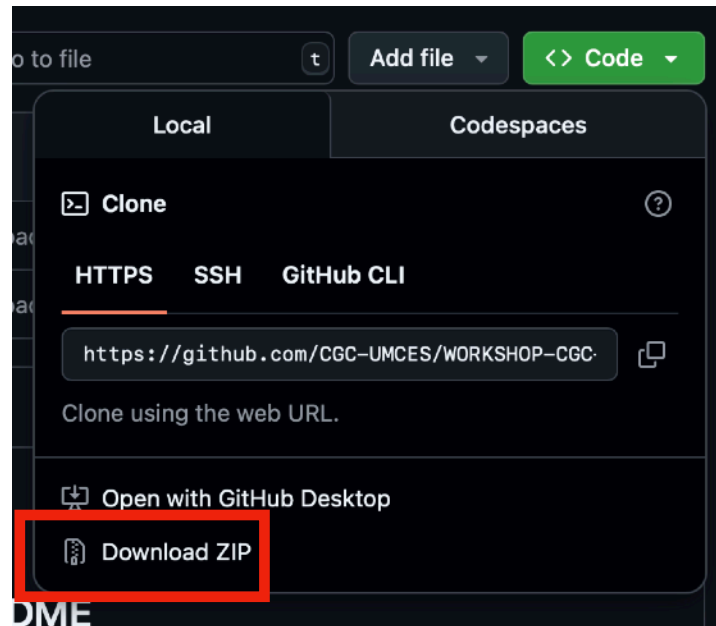

Navigate to the main workshop GitHub repository in your browser (url below).

***<https://github.com/CGC-UMCES/WORKSHOP-CGC-SCIPe-AI-ML-2025/tree/main>***

Click the green < > **Code** button (see red square in screenshot below).

In the dropdown menu, select **Download ZIP** (see red box in screen shot below). This will save a compressed .zip file of the entire repository to your computer's "Downloads" folder or wherever your default downloads go to.

Upload or drag and drop the ZIP File to Google Drive

Open your [Google Drive](#).

Click the **+ New** button in the top-left corner and select **File upload**.

Find and select the .zip file you just downloaded from GitHub.

The file will now be uploaded to your Google Drive. Right-click it and select **Extract all** (or use a connected app) to unzip the files directly within Google Drive. Once you unzip the file you will have a folder named "**WORKSHOP-CGC-SCIBE-AI-ML-2025-main**" in your drive that contains two subfolders and all the files you will need for the workshop!

Congrats you are ready to go!
